## DETAILED ACTION

1. Upon further consideration of the prior art references, it is determined that the previously allowed claims 5-7 are not patentable in view of Crary (2,215,116).

Rejections based on Crary follow. This office action is **non-final**.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crary (2,215,116).

'116 discloses the invention as claimed except for the circular shape of the grip. It would have been an obvious matter of design choice to make the rectangular grip with a circular peripheral edge or whatever form or shape was desired or expedient. A change in form or shape is generally recognized as being within the level of ordinary skill in the art, absent any showing of unexpected results. *In re Dailey et al.*, 149 USPQ 47.

As to claim 7, it would have been an obvious matter of design choice to form the grip with a width of 4½ inches and the base of 1 inch to fit various user's hands, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

Note that '116 structurally meets the limitations of paperboard, recesses (12, 13) forming weakened lines, and "bunched material lines" is an inherent characteristic of pressing and rolling. How the structure "may be" used is given no patentable weight.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Crary '116 in view of Fricano (6,234,946).

'116 does not show the base having both ends shaped arcuately. '946 teaches the base portion having both arcuate ends to hold the shopping bag handle. It would have been obvious to one of ordinary skill in the art at the time the invention was made of modify base portion of the '116 grip with both ends arcuately shaped as taught by '946 to retain the shopping bag handle in place.
